

Get your business connected with QSS
featuring Microsoft® .NET framework-based applications.

Providing Complete Solutions

If you want your system to run smoothly, then rely on QSS. We've been in business for over 14 years and our programming staff has a combined 90 years of experience programming on Epicor products in Universe and UniData environments.

Custom programming

Fast, affordable, high-quality custom programming for ManFact™, Avanté™, DataFlo™ and Manage 2000™ products...guaranteed. That's what you can expect with QSS. On top of that, all updates to your database use your existing ManFact, DataFlo or Avanté business rules, so you can be assured of the integrity for every transaction.

Upgrades

When you're ready to upgrade your system, please give us a call. We take care of everything – from reintegrating your customizations, piloting preparation and performing the live conversions. On-site and remote installation options are available.

Bar code applications

Our customized and cost-effective bar code solutions can help your business run more smoothly and efficiently. They're based on Microsoft, so you don't have to purchase other proprietary software to use them, plus they both work with Unix- and Windows® NT®-based systems. Best yet, our bar code solutions are often less expensive than "packaged" ones and they're customized for the way you do business.

Microsoft, Windows, SQL Server and NT are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries. DataFlo, ManFact, Avanté and Manage 2000 are products, copyrights and trademarks of Epicor Software Corporation. UniVerse & UniData are products, copyrights and trademarks of IBM software. Crystal Reports is a registered trademark of Crystal Decisions. Oracle is a product, copyright and trademark of Oracle Corporation. All other trademarks or registered trademarks referenced are the property of their respective owners.

PDA interfaces

If you have workers in the field or on the go, our PDA interfaces are a lifesaver. These wireless interfaces allow sales and field representatives to access your ManFact, Avanté or DataFlo system without requiring your Epicor system to be accessible on the internet or purchasing other proprietary software. Like our bar code applications, our PDA interfaces are Microsoft-based and work with both Unix- and Windows NT-based systems.

XML Web services

Web services are a fast, secure way to communicate information in today's world.

QSS develops customized Web services that can automate your business, thus saving you time and money. For instance, you can have a Web service that provides updated purchase delivery schedule requirements to your vendors based on MRP demand changes. Or instead of having an employee manually enter sales orders and purchase orders, your system can automatically create and process the transactions using XML.

Crystal Reports®

Now you can easily drag and drop and slice and dice information any way you wish with our Crystal Reports interface. Tired of fighting with those multi-values? We've solved the problem for you. Our interface essentially "normalizes" the database, so you can easily create your own presentation-quality, interactive reports and graphs.

These reports can easily be published and viewed by any user with the proper security using a standard Web browser.

EDI

With QSS, EDI no longer needs to be a complicated and difficult application. We provide a very easy-to-use, cost-effective and customized solution using GENTRAN™, the software package from Sterling Commerce. Already have an EDI translation package installed? No problem. We also work on existing EDI systems like Trusted-Link™, STX™, UserBase™ and others.

Office Link

As you type, or with a touch of a button, you can transfer data between your Epicor system and Microsoft Office products. No more uploading and downloading ASCII files, no incompatibility problems, just a seamless integration of data online and in real time.

Database connectivity

Do you have existing databases and would like to integrate them with your ManFact, DataFlo or Avanté system? No problem. We can make online, real time seamless interfaces to databases like Microsoft Access, Microsoft SQL Server™, Oracle® and others. For example, as you enter a work order, or create an ECO, you may wish to update a parallel engineering database written in Oracle. We'll set it up so these updates happen automatically.
