

Get your business connected with QSS
featuring Microsoft® .NET framework-based applications.

Crystal Reports®

Put the power, flexibility and ease-of-use of Crystal Reports to work for your business

The world's leader in reporting software, Crystal Reports is THE software to turn to for everything from distributing reports over the internet in real time, creating a variety of charts and graphs and integrating reports into other applications. Best yet, Crystal Reports is easy to use because it has a graphical user interface.

But as an Epicor user, you haven't been able to take full advantage of everything Crystal Reports offers...until now. QSS has developed a Crystal Reports interface that essentially "normalizes" your database, allowing you to have a seamless integration between Crystal Reports and your Avanté™, DataFlo™ or ManFact™ system. With our solution, your information is online and in real time, eliminating data warehousing. We've even taken care of the multi-value problem – no longer will you need to fight those multi-values to get a custom report from your system.

Slice and dice any way you want

Now you can easily slice and dice and drag and drop information any way you wish with our Crystal Reports interface. You can easily create your own presentation-quality, interactive graphs and reports as well as viewing the "Big Picture" summary information or drill into the details with a few clicks.

With Crystal Reports, any report you create can be published and viewed by any user with the proper security using a standard Web browser. Reports can even be made available to any wireless Pocket PC device, so your field reps and on-the-go employees can still keep in touch.

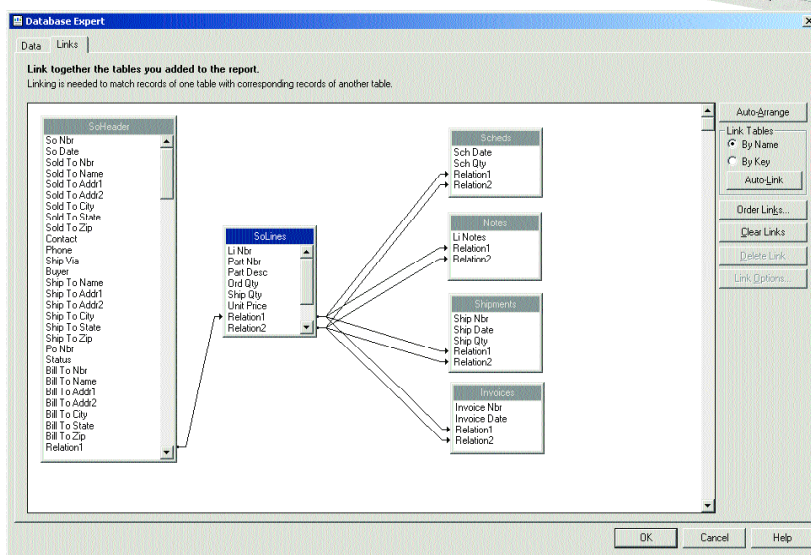

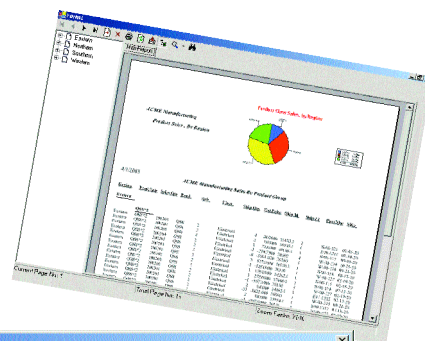

On top of all that, you'll no longer need to pay for custom-report development from IT professionals. Our interface allows you to create internally whatever reports you need – from simple to sophisticated and everything in-between.

Connect to any database

Crystal Reports natively connects to other databases like Microsoft Access and Microsoft SQL Server™. Now, with our Crystal Reports interface, you have the ability to combine reporting from your Epicor database with other internal databases.

Put the power to work for you today

Start taking advantage of Crystal Reports today. Choose which level of reporting best meets your needs – individual views, modular views or a system-wide solution. Contact us for an individualized quote.
